GENERAL DESCRIPTION

Either to create standalone systems using BITalino sensors or simply to facilitate prototyping with an Arduino Pro Mini, this is a nice-to-have tool. The BITalino Resurrection Pro Mini provides pin clusters for the Arduino Pro Mini MCU, UART, and power, making it easy to connect and interchangeably use different components. The analog and digital ports are also exposed in individual pin clusters with VCC, VCC/2, GND, and I/O, (a practical feature when prototyping your hardware), in which the pitch and layout of the pins even enables the use of RJ22 or 4-pin Molex Sherlock sockets for greater convenience.
